

CS101 - Introduction to Computer Science - Fall 2026

COURSE INFORMATION

Course: CS101 Introduction to Computer Science (4 credits).

Instructor: Dr. Amara Osei. Office: Turing Hall 214.

Office hours: Tuesdays and Thursdays, 14:00-16:00, or by appointment.

Email: a.osei@example.edu. Allow up to 48 hours for a reply on weekdays.

Lectures: Mon/Wed 10:00-11:20, Turing Hall 105. Lab: Fri 13:00-14:50, Lab B.

GRADING

Final grades in CS101 are calculated as follows: weekly programming assignments 30%, two midterm exams 30% (15% each), final project 20%, final exam 15%, lab participation 5%.

Letter grades: A 93-100, A- 90-92, B+ 87-89, B 83-86, B- 80-82, C+ 77-79, C 73-76, C- 70-72, D 60-69, F below 60.

There is no curve and no extra credit in CS101.

LATE SUBMISSION POLICY

Assignments in CS101 are due at 23:59 on the posted due date via the course portal. Late work is accepted for up to 72 hours after the deadline with a penalty of 10% of the earned score per 24-hour period or part thereof.

After 72 hours, late submissions receive a grade of zero and are not eligible for feedback.

Each student has three penalty-free late days per semester, which may be applied to programming assignments only. Late days must be claimed in the course portal before the deadline passes; they cannot be applied retroactively.

The final project and both midterm exams are excluded from the late policy and from penalty-free late days. No late final projects are accepted under any circumstances.

Extensions beyond the late policy require documented medical or family emergency and must be requested in writing to Dr. Osei within seven calendar days of the deadline.

ATTENDANCE AND PARTICIPATION

Lab attendance is mandatory. Students may miss two labs without penalty; each additional unexcused absence reduces the lab participation component by two percentage points.

Lecture attendance is not graded, but material presented in lecture and not in the readings is examinable.

ACADEMIC INTEGRITY

Programming assignments in CS101 are individual work. Discussing approaches is permitted; sharing or copying code is not.

Generative AI tools may be used to explain concepts but not to produce submitted code. Any AI assistance must be disclosed in the submission comments.

A first violation results in a zero on the assignment and a report to the Office of Academic Integrity. A second violation results in failure of the course.
